Exhaust Systems

**RENAULT**

# Exhaust Silencers

Exhaust silencers are a very important part of exhaust systems, so their production requires special attention.

All welds are entrusted to the robots and partly to people. High geometric accuracy is achieved by creating elements on CNC machines, and the final product passes the quality control of production.

# Exhaust Pipes

Exhaust pipes as an integral part of the exhaust system are produced in more than thousand different models.

In addition to mass-produced world-renowned manufacturers, we also produce on the basis of a draft or a sample taken by the customer.

## EXHAUST SPARE PARTS

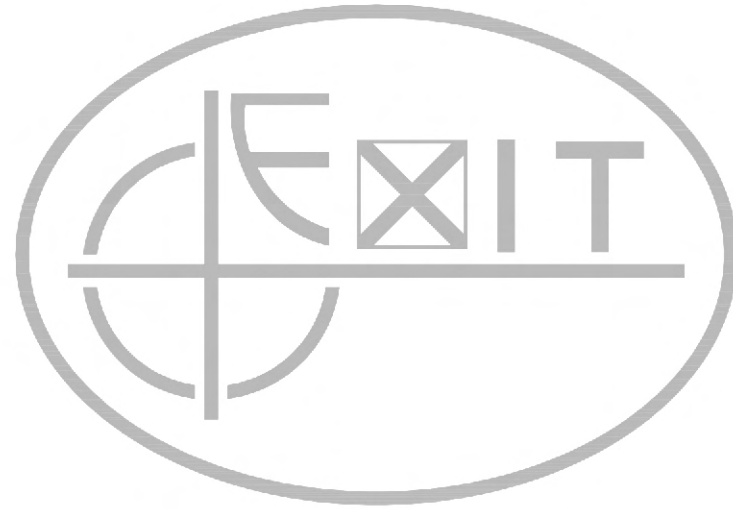

# Flexible Pipes

The production program Exit Ltd company also includes flexible pipes of Inox and Zn.

The function of a flex is to compensate and to absorb vibrations in the exhaust system. If the flex pipe is incorrectly installed or compressed, stretched or bent, it will cause a breakage in the flex pipe after a short time, this happens due to the vibration.

# Clamps

Exit Ltd offers a wide range of products to connect and fit exhaust components. The portfolio includes flat clamps, DIN Clamps, V-clamps, Flex clamps and U clamps from very simple and cost effective design solutions all the way up to the highest class of products serving the most demanding installations
